DATE MAILED: 10/04/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

## Office Action Summary

Application No.

10/735,426

Applicant(s)

HEINZ ET AL.

Examiner

Rabon Sergeant

Art Unit

1711

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-16 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-16 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 1711

1. Claims 1-7 and 16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Applicants have referred to test standard DIN 51004; however, applicants have failed to provide an adequate written description of the test standard. A copy of the standard in English has not been provided.

2. Claims 2, 4-7, and 16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Applicants have claimed that the thermal conductivity is determined by “a hot wire method”; however, it is unclear if the reference to “a hot wire method” corresponds only to the hot wire method disclosed within page 7, lines 38+ of the specification. If applicants intend that other methods be encompassed by the language, then applicants have failed to provide adequate guidance with respect to these other testing methods. One could not apply other such methods without resorting to undue experimentation. *In re Wands*, 858 F.2d 731, 737, 8 USPQ2d 1400, 1404 (Fed. Cir. 1988).

3. Claims 8-15 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in

Art Unit: 1711

the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Applicants have failed to specify the type of molecular weight (i.e.; number average or weight average) for the active hydrogen compounds so limited. This information is necessary to adequately identify the compounds. *In re Wands*, 858 F.2d 731, 737, 8 USPQ2d 1400, 1404 (Fed. Cir. 1988).

4. Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Firstly, within claim 1, the language, “at least on polyisocyanate”, is incorrect.

Secondly, within claim 8, applicants have specified that component b) is at least one compound; however, applicants further claim that component b) is required to be a mixture of two compounds, bi) and bii). In view of the requirement that two compounds be present, the “at least one compound” language renders the claims indefinite.

Thirdly, within claims 8 and 11-13, the components for b) are not mutually exclusive. Compounds bi) through bv) are specified that overlap in terms of functionality and molecular weight; accordingly, it cannot be determined to what extent these components are required to be different or distinct. As drafted, a single specific reactant will satisfy the requirements of multiple components.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1711

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 8-10 and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Gansen et al. ('253).

Patentees disclose the reaction of polyisocyanates, such as blends of MDI and p-MDI, with polyol blends in the presence of catalysts at index values of 70 to 115. The polyol blends encompass polyols which correspond to applicants' claimed bi) and bii) polyols. See abstract; column 2, lines 1-25 and 55-63; column 3, lines 16+; and column 4, lines 1-36.

Art Unit: 1711

7. Claims 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gansen et al. ('253).

As aforementioned, patentees disclose the reaction of polyisocyanates, such as blends of MDI and p-MDI, with polyol blends in the presence of catalysts at index values of 70 to 115, wherein the polyol blends encompass polyols which correspond to applicants' claimed bi) and bii) polyols. The reference further discloses polyol components, including polyesters, and chain extenders that encompass applicants' claimed biii), biv), and bv) components. Patentees' third component c) encompasses applicants' biii), and applicants' biv) and bv) components are disclosed at column 3, line 46 and 63+. Given these disclosures and the reasonable expectation that blends of the aforementioned polyols would yield viable polyurethanes, the position is taken that one of ordinary skill in the art would have been motivated to blend the respective polyols for their known functions, as necessary, so as to ultimately obtain the instant composition. It has been held that it is obvious to utilize a known component for its known function. *In re Linder*, 173 USPQ 356. *In re Dial et al.*, 140 USPQ 244.

8. Claims 1-3 and 16 are rejected under 35 U.S.C. 102(e) as being anticipated by Onder (US 2004/0087739 A1).

The reference discloses thermoplastic ether urethane having applicants' claimed crystalline content and aromatics content. The crystalline content is disclosed within paragraph [0020] and the aromatics content is evident from the type and amounts of reactants used within the examples. Furthermore, the use of fillers is disclosed within paragraph [0018].

9. Claims 4-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Onder (US 2004/0087739 A1) in view of Grimm et al. ('447) and Poisl et al. (US 2003/0134920).

Art Unit: 1711

As aforementioned, the primary reference discloses thermoplastic ether urethane having applicants' claimed crystalline content and aromatics content, which may also contain fillers. Though the reference is silent regarding the use of microspheres as fillers, their use was nonetheless known at the time of invention. The secondary references disclose that glass, polymeric, and ceramic microspheres convey beneficial physical and thermal properties when incorporated within polymers. See abstract and columns 1-3 within Grimm et al. See paragraph [0005] within Poisl et al. Therefore, the position is taken that it would have been obvious to incorporate microspheres as fillers within the primary reference, in view of the benefits that would reasonably be expected to result from their incorporation. It has been held that it is obvious to utilize a known component for its known function. *In re Linder*, 173 USPQ 356. *In re Dial et al.*, 140 USPQ 244.

Any inquiry concerning this communication should be directed to R. Sergent at telephone number (571) 272-1079.
